

EDUCATION

Master of Computer Applications (MCA)
VTU Regional Center, Mysuru, Karnataka (Visvesvaraya Technological University)
2024 – 2026

Bachelor of Computer Applications (BCA)
St. Joseph University, Chumukedima, Nagaland
2022 – 2024

Higher Secondary (Science)
Kohima, Nagaland
2020

High School
Modern Academy, Kohima, Nagaland
2018

PROJECTS

E-Commerce Platform *React, Node.js, MongoDB, Google OAuth, JWT*

- Built a production-ready e-commerce site with cart persistence, an admin dashboard, and email/SMS order notifications using MVC architecture.
- Outcome: Implemented Google OAuth and JWT-based authentication for secure, low-friction login, and an admin dashboard that made product and order management accessible to non-technical staff.

DNS Record Management System *MERN Stack, RBAC, REST APIs*

- Developed a full-stack DNS manager with authentication, role-based access control, and a real-time monitoring dashboard for record status.
- Outcome: Role-based access restricted record changes to authorized users only, and the live status dashboard cut down manual record checks.

Web-Based Firewall Manager *HTML/CSS/JS, Python, Linux (Kali)*

- Built a browser-based GUI for iptables rule management, removing the need to work directly in the terminal.
- Outcome: Made firewall configuration more accessible for non-CLI users and reduced the chance of manual iptables syntax errors, while reinforcing core network security concepts.

Phishing Detection Website *JavaScript, Python, Security Heuristics*

- Created a web interface that analyzes and flags potentially malicious URLs using heuristic-based feature extraction.
- Outcome: Gave non-technical users a simple, fast way to check link safety before clicking, applying practical cybersecurity heuristics learned during coursework.

System Monitor Dashboard *HTML, CSS, JavaScript*

- Built a real-time CPU, memory, and network monitoring tool with dynamic charting and a responsive layout.
- Outcome: Delivered at-a-glance visibility into system resource usage, useful for spotting performance issues quickly.

Android Mini-Games App *Android Studio, Java/XML*

- Developed a multi-game Android platform with activity lifecycle management, intent handling, and score persistence.
- Outcome: Ensured a smooth, crash-resistant experience across multiple games by correctly managing activity lifecycles and persisting scores between sessions.

English Premier League Analysis (MCA Final Year Project) *Power BI, Python, Jupyter Notebook*

- Built a football match prediction model and an interactive club statistics dashboard.
- Outcome: Achieved 71% ROC AUC on match outcome predictions and visualized club performance trends through Power BI dashboards for easy interpretation.

SUMMARY

MCA fresher (2024–2026) with a solid foundation across HTML, CSS, JavaScript, Java, C, C++, Python, and SQL, built through hands-on academic and personal projects. Comfortable working across the stack — from responsive front-end interfaces to REST APIs, authentication, and role-based access control — using React, Node.js, and MongoDB. Particularly drawn to cybersecurity fundamentals, having built practical tools for firewall rule management, phishing URL detection, and network monitoring on Linux (Kali). Approaches problems methodically, learns new tools quickly, and communicates clearly with both technical and non-technical stakeholders. Looking for an entry-level role to apply this foundation, contribute from day one, and keep growing under real-world mentorship.

SKILLS

Programming Languages: HTML/CSS, JavaScript, Java, Python, C/C++, SQL/MySQL, PHP
Linux Basics: Kali Linux, iptables
Soft Skills: Verbal Communication, Results Focus, Ability to Learn, Emotional Intelligence

LANGUAGES

Hindi, English
